

## ABSTRACT

An inflatable urinal for attachment to a toilet, having a bowl and a seat, for preventing spillage onto the toilet and floor during urination. The urinal includes a plurality of air chambers, held together by seams, which inflate to form an elongated and continuous urinal. The urinal includes a circular support rim attached to one of the air chambers and is used to secure the urinal to the toilet. The circular support includes a plurality of fasteners for coupling with a plurality of mounts attached to the bowl of the toilet. The fasteners of the urinal hold the urinal securely to the mounts of the toilet.
